## Adult (18 Years and Over) Problem List

Use the Adult Problem List to record significant problems, medical diagnoses, preventive health care, medication/education management and/or conditions and operation/invasive procedures for easy access in your patients' records. This form provides a way to keep a summary of your patients' overall medical conditions and meet Documentation of Care (DOC) Review requirements.

The objective of the DOC Review is to evaluate the quality and the appropriateness of primary care physicians' (PCP) office medical record documentation. The goal is to promote patient safety, continuity of care and continuous improvement. The annual review evaluates medical record documentation but does not define standards of care or replace a physician's judgment. The monitoring of documentation of patient care is one of the requirements for accreditation by the National Committee for Quality Assurance (NCQA) and the Agency for Health Care Administration (AHCA). The PCP medical records audit is against a set of fixed quality indicators. One of these key indicators is a problem list or problems listed in the progress notes, which contains significant problems, medical diagnoses, and/or conditions and operative/invasive procedures. This problem list or summary should be easily accessible in the record.
