Email your completed form to us at [ICD-10testing@floridablue.com](mailto:ICD-10testing@floridablue.com)

Note: It is critical to successful testing that we collaborate with both providers and their vendors who enable ICD-10 transactions for their clients.

**INSTRUCTIONS**

1. Print this form in order to complete it by hand.
2. Complete your contact information at left of form.
3. Instruct your medical coder(s) to complete this document by coding the scenarios below, first using ICD-9 Dx codes followed by ICD-10 Dx codes. Be sure coder(s) understand they are to code in ICD-10 from the selected clinical scenarios vs. coding from ICD-9 to ICD-10 (mapping).
4. Scan and return by email your completed form to [ICD-10testing@floridablue.com](mailto:ICD-10testing@floridablue.com). If you do not have access to a scanner and would like to return your form to us via fax, please fax to 904-997-5571, Attn: Martina Fiorelli.
5. Within two weeks of receipt, Florida Blue will review your completed coding document and provide you with observations for scenarios that we have identified as a potential impact to claims adjudication.

NOTE: If you prefer, you may contact Florida Blue via email [ICD-10testing@floridablue.com](mailto:ICD-10testing@floridablue.com) and you will be provided an Excel spreadsheet on which you can view and code these same scenarios.

Scenario #	Scenario Description	ICD-9 Code	ICD-9 Description	ICD-10 Code	ICD-10 Description
S013	The patient is a 32-year-old otherwise healthy male who presents today with severe lower leg and ankle pain. He reported that he injured his ankle three days ago when he fell from his bicycle while riding on a path in a forest preserve. Musculoskeletal examination revealed tender, painful, and swollen lower leg. Diagnostic x-ray confirmed traumatic, closed fracture of the right, lateral and medial malleolus. Patient is being referred to an orthopedic physician for further evaluation and treatment. <b>Impression:</b> Closed fracture of the right ankle, bimalleolar.				
S025	A 45-year-old male comes in with a chief complaint of pain in the right shoulder. Patient denies a fall or injury. No significant health reported. Musculoskeletal examination performed which reveals tenderness and limited range of motion in the right shoulder region. Plan includes x-ray of the right shoulder, NSAID, and follow-up in 2 weeks. <b>Impression:</b> Pain in shoulder joint region.
